Client meeting November 28, 2017

He wants us to create the profile for the amazon database

He just wants dates, does not have to be chronological

He just wants the data and he will figure it out, wants a website built upon PHP that he might be able to create read and write from the database

Data on leafing out, have data on first leaf and all that, Eric - could be slider from 0 to 100, he just is happy that people will be collecting the data

Schedule with Dr. Graham - meet after every iteration - send a summary to him every week if possible - every other week

Add the client to the GitHub so that he will be able to see documentation and maybe learn some things

Give Dr. Graham the SRS on Thursday so that he can see it and read it and do what he will with it

Another cell a period of interest - when forest fire + other incentives occur automatically Special events

Fun facts should have a obscenity filter and any other text input
